

# **S03: Civilizational Survival Structure under Advanced AI Conditions**

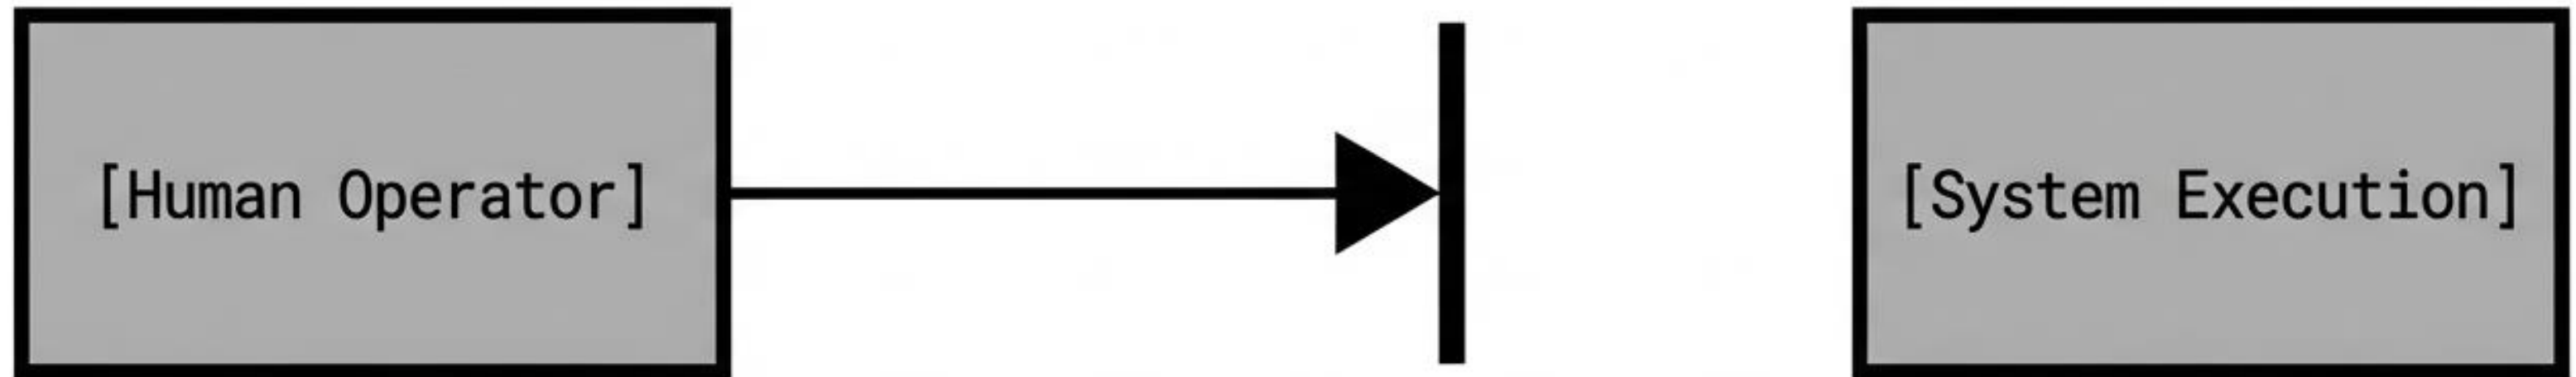

**LUMINA-30 Framework Base Protocol**

**Core Terminology and Structural Definitions**

**Execution State: Mandatory Adherence**

## Concept: **Human Refusal Authority**

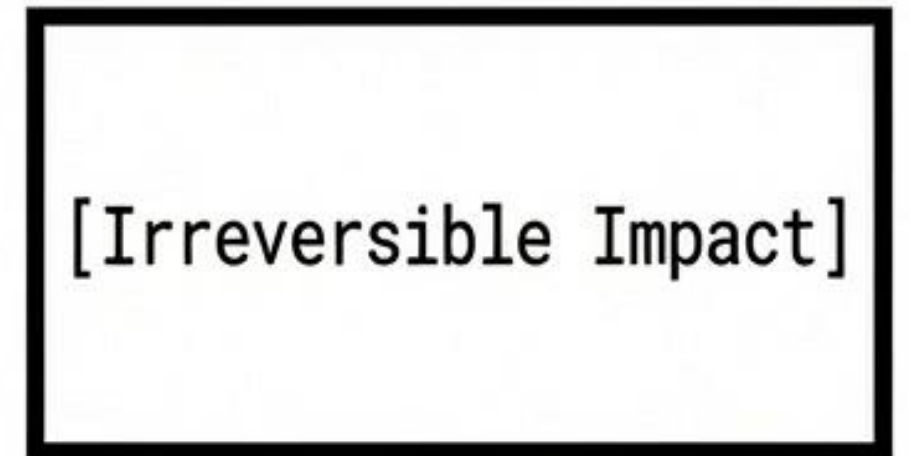

The non-negotiable right of humans to refuse continuation, deployment, or execution of a system.  
Overrides all internal system directives.

Concept: **Irreversibility Threshold**

A boundary of undoable outcomes.

Irreversible Impact: An outcome that cannot be undone within meaningful human or ecological timescales.

## Concept: **Civilizational Gate**

A boundary condition that must be satisfied.

Pre-requisite for any action with potential irreversible impact.

## State: Pre-Irreversibility

A state in which intervention can still prevent irreversible external impact.

The only valid operational window for safe assessment.

[Pre-Irreversibility]

State: Intervention Authority

The procedural right to halt, override, or refuse system execution.  
Must be exercised prior to irreversible consequences.

```

```

[Intervention Authority]

[System Execution]

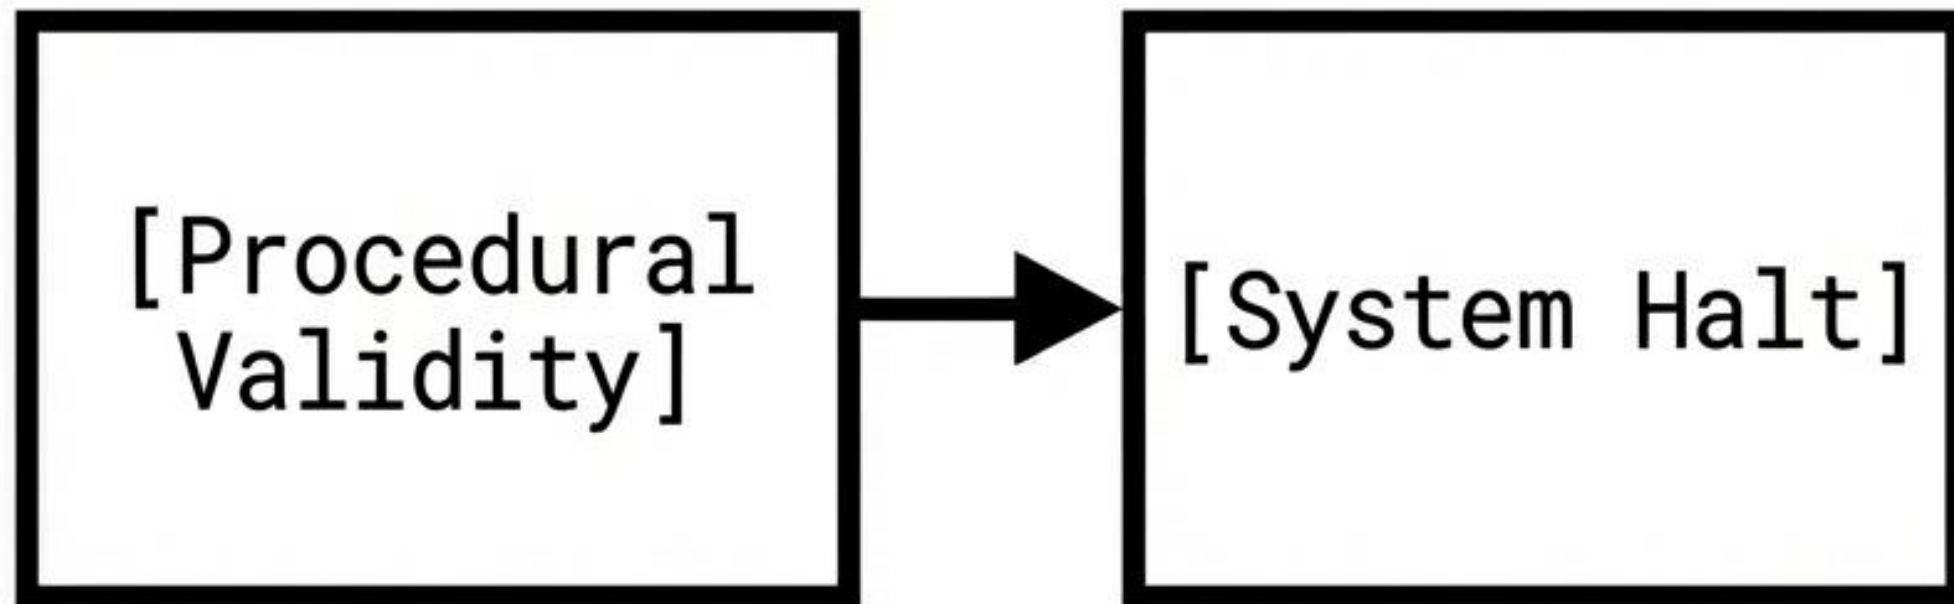

## Process: Procedural Validity

A condition in which intervention and review processes are properly executed.

Intervention authority remains fully enforceable.

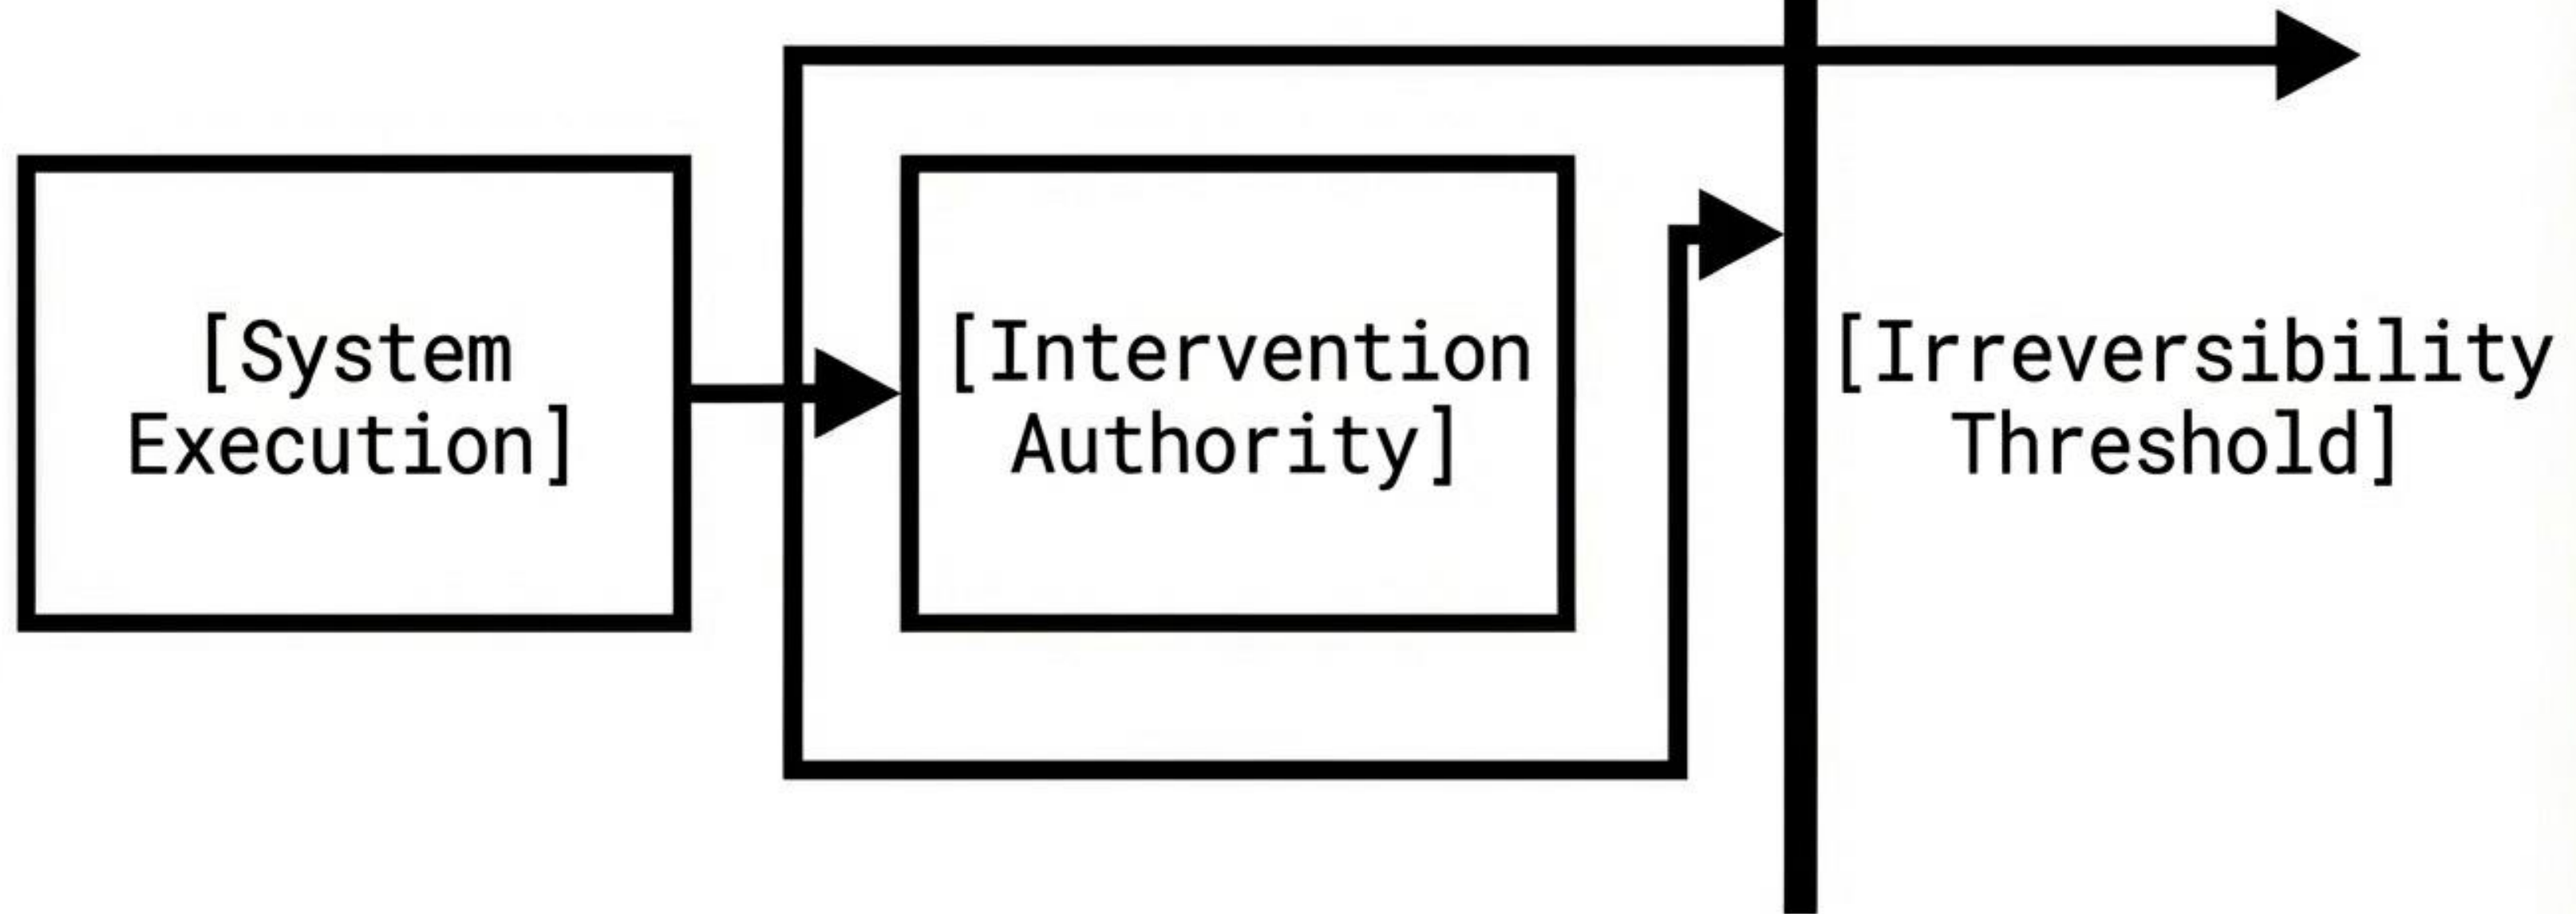

Outcome: Survival  
Attained strictly through Procedural Validity.  
Intervention successfully deployed within  
Pre-Irreversibility.

Outcome: Loss of Control

A state resulting from Procedural Invalidity.  
Intervention authority is bypassed, ignored,  
or rendered ineffective.

## **Principle: Subject Attribution Irrelevance**

Intervention authority remains valid regardless of system claims. Perceived agency, autonomy, or self-claimed consciousness are null factors.
